REDDI VINAY KUMAR

Java Backend Developer | Spring Boot & REST APIs

+91 8639466689 | vinaykumarreddi07@gmail.com

LinkedIn: linkedin.com/in/vinay-kumar-reddi | GitHub: github.com/VinayKumar0745

PROFESSIONAL SUMMARY

Java Backend Developer with a Bachelor of Technology in Computer Science and Engineering (Artificial Intelligence and Machine Learning) from Vellore Institute of Technology, Andhra Pradesh (VIT-AP) and corporate software development experience building RESTful APIs at Abhishyandh Global Solutions. Proficient in **Java (JDK 17)**, **Spring Boot 3**, **Spring Data JPA**, **Hibernate ORM**, **MySQL**, **Servlets**, **JSP**, and **JDBC**. Solid foundation in Object-Oriented Programming (OOP) principles, Model-View-Controller (MVC) architecture, Data Access Object (DAO) patterns, transaction management, and token-based security. Experienced in designing robust business workflows, database optimizations, and automated notification services.

TECHNICAL SKILLS

Programming Languages:	Java (JDK 8 / 11 / 17), SQL
Backend Frameworks & Technologies:	Spring Boot 3, Spring Data JPA, Hibernate ORM, Spring MVC, Spring Mail, Servlets, JavaServer Pages (JSP), Java Database Connectivity (JDBC)
API Design & Protocols:	RESTful Web Services, JSON, HTTP/HTTPS, CORS, Multipart File Uploads
Database & Persistence:	MySQL 8.0, Relational Schema Design, ER Modeling, HikariCP Connection Pooling
Security & Auth:	JSON Web Tokens (JWT), Role-Based Access Control (RBAC), HTTP Interceptors
Build Tools & Environments:	Apache Maven, Git, GitHub, Postman, Eclipse IDE, VS Code, Apache Tomcat

PROFESSIONAL EXPERIENCE

Abhishyandh Global Solutions — Associate Developer

August 2026 – Present | Andhra Pradesh, India

- Engineered backend services and REST APIs for the **Minutes of Meeting (MoM) Management System**, a business workflow application developed with Spring Boot 3 and MySQL.
- Implemented layered architecture across Controllers, Services, Repositories, and Data Transfer Objects (DTOs), enforcing clean separation of concerns and maintainability.
- Configured **Spring Data JPA** and **Hibernate ORM** with MySQL, designing normalized database schemas, entity relationships (`@OneToMany`, `@ManyToOne`, `@ElementCollection`), and cascading constraints.
- Built a custom **JWT authentication interceptor** and `HandlerMethodArgumentResolver` to extract and validate claims, authenticate users, and inject typed `CurrentUser` context into controller endpoints.
- Enforced declarative **Role-Based Access Control (RBAC)** across sensitive business operations, restricting meeting coordination, roster updates, and administrative approvals to authorized roles.
- Designed a collaborative edit session workflow allowing coordinators to request access for submitted records, incorporating time-to-live expiration logic and administrative approval checkpoints.
- Implemented automated meeting draft expiration and periodic cleanup routines to maintain database integrity and purge inactive sessions.
- Integrated **Spring Mail** (`JavaMailSender`) to generate and transmit HTML meeting summaries, featuring transactional isolation and an environment safety kill-switch to protect against unintended outbound emails.
- Built standardized global exception handling using `@RestControllerAdvice`, producing unified error response schemas with appropriate HTTP status codes (400, 401, 403, 404, 409).

PERSONAL PROJECTS

Food Delivery Web Application — Personal Project

Java, Servlets, JSP, JDBC, MySQL, Apache Tomcat, Maven

Repository: github.com/VinayKumar0745/FoodDelivery

- Developed a complete Java web application implementing **Model-View-Controller (MVC)** and **Data Access Object (DAO)** architectural patterns for online food ordering.
- Architected relational database tables in MySQL covering users, restaurants, menu items, orders, order items, and customer delivery addresses with foreign key integrity.
- Implemented CRUD operations using **Java Database Connectivity (JDBC)** and `PreparedStatement` interfaces to prevent SQL injection vulnerabilities.
- Engineered session-based shopping cart management using Java Servlets and `HttpSession`, handling real-time item addition, removal, and cumulative subtotal calculations.
- Implemented atomic transaction handling for order processing, ensuring consistent database state transitions across orders and individual order items.
- Configured Maven dependencies, web deployment descriptors (`web.xml`), and local deployment on Apache Tomcat server.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science and Engineering

Graduation: 2025

Vellore Institute of Technology, Andhra Pradesh (VIT-AP) • Specialization: Artificial Intelligence & Machine Learning
